

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MME-301 **Course Title:** Introduction to Metallurgy and Materials

2. Contact Hours: L: 3; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **3rd Semester:**

Autumn Spring

6. Objective:

To familiarize the students with the fundamentals and other aspects of various metallurgical processes, engineering materials and their properties, etc.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	An introduction to Metallurgy and Classification of Metallurgical Processes.	04
2.	Classification of Engineering Materials based on Engineering properties. A general discussion on other engineering materials plastics, rubber, polymers, ceramics, refractories, glasses, composites etc.	08
3.	Introduction of Nano-technology; its importance and applications.	03
4.	A brief discussion on important ferrous and non-ferrous materials and their production processes (flow sheets giving important parameters).	07
5.	General introduction to phase rule and phase diagrams (Binary systems). An overview of iron carbon equilibrium diagram and the critical phenomenon. Brief discussion on plastic deformation & Strain Hardening.	08
6.	Bonding in solids, crystal structure & imperfections. Plastic deformation in single crystals.	07
7.	Single crystals, polycrystalline materials and factors affecting their mechanical properties. Yield strength, tensile strength and rupture strength. Ductility and malleability, toughness and hardness of materials.	05
Total		42

8. Suggested Books:

S. No.	Name of Book	Author(s)	Publisher	Year of Publications
1.	Principles of Extractive Metallurgy	J. Newton	J. Wiley	1959
2.	Materials Science and Engineering	V. Raghavan	PHI	2008
3.	Elements of Materials Science	Van Vlack	Addison Wesley	1998
4.	Engineering Materials Science	Richards	Wadsworth Pub. Co.	1961
5.	Structure and Properties of Materials	Wulff Series	John Wiley (New York)	1966
6.	Material Science	R. S. Khurmi & R. S. Sedha	S. Chand	2005
7.	Engineering Materials II : An introduction to microstructures , processing & design	Ashby, M.F., & D.R.M. Jones	Pergamon Press	2006
8.	Material Science	Callister	John Wiley	2008
9.	Principles of Material Science and Engineering	Smith	Mc Graw Hill	1990

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: CHM-03 **Course Title:** Metallurgical and Instrumental Analysis

2. Contact Hours: L: 2; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **3rd Semester:**

Autumn Spring

6. Objective:

To acquire knowledge and become familiar with the various metallurgical analysis techniques and the instruments involved therein.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1	Principles of Volumetric, Gravimetric and Fire assay methods. Electrogravimetry, potentiometry, polarography, colorimetry and conductometry.	10
2.	Absorptimetry, Emission spectrophotometry, Atomic Absorption Spectrophotometry, flame photometry, colorimetry and X-ray fluorescence.	10
3.	Determination of gases in metal. Introduction to Thermal Analysis (DTA, TMA, TGA, DSC, etc.) Chromatography, Radio-chemical analytical methods.	12
4.	Applications of the above analytical methods to the assessment and evaluation of alloys, ores, slags, ceramics, glass and refractories.	10
Total		42

8. Suggested Books:

S. No.	Name of the Book	Author(s)	Publisher	Year of Publications
1.	Instrumental Methods of Analysis	Williard H.H., Merritt L.L., and Dean J.A.	Wadsworth	1981
2.	Standard Methods of Chemical Analysis, Vol: III A	Welcher F.J.	Van Nostrand	1962
3.	Instrumental methods of Chemical Analysis	Ewing G.W.	McGraw-Hill	1985
4.	Metallurgical Analysis	Jain and Agarwal,	Khanna Publishers, New Delhi	1985
5.	Problems in Quantitative Analysis	A. Musakin,	Mir	1984
6.	A brief introduction to modern chemical Analysis	D.G.Peters, J.H.Hayes and G.M. Hieftje	Saunders	1976
7.	Quantitative chemical Analysis 5th ed.	Vogel	Longman, Harlow	1989

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MTH-308 **Course Title:** Mathematics-III

2. Contact Hours: L: 3; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** - **Practical:** -

4. Relative Weightage: M-I: - M-II: - ASM: - ME: - PRE: -

5. Credits: 0 4 **3rd Semester:** Autumn Spring

6. Objective:
To understand and familiarize with the algebra of matrices and various aspects of statistics and probability.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1	<p>MATRICES: Definitions and algebra of matrices. Transverse of a matrix Symmetric, skew-symmetric, Hermitian, and skew-Hermitian matrices inverse matrix, orthogonal and unitary matrices, Solution of simultaneous equations by matrix method. Triangular matrices, Rank of a matrix, equivalent matrices, elementary transformations, normal form, and eigen vectors of a matrix, Caley-Hamilton theorem. Quadratic forms.</p>	18
2.	<p>STATISTICS AND PROBABILITY Measures of central tendency and Measures of variations (Dispersions), Moments, Measures of Skew-ness and kurtosis. Random experiment, sample space, events, classical, statistical and axiomatic definitions of probability. Statements and proof of theorems on addition and multiplication of probabilities. Simple problems. Baye’s Theorem on conditional probability. Random variable, derivation of formula for mean, variance and moments of random variables for discrete and continuous cases. Laws of expectation, Binomial, Poisson and normal distributions, Beta and Gamma distribution. T-distribution, F-distribution, Chi-square distribution and their applications. Method of least squares, fitting a straight line and parabola of degree ‘p’. Regression and correlation Multiple and partial correlation.</p>	24
	Total	42

1.	Fundamentals of Mathematical Statistics	S.C Gupta and V.K Kapoor	Sultan Chand and Sons, N. Delhi	2000
2.	Statistical Theory and Methodology in Science & Engg.	Brown lee	John Wiley and Sons	1965
3.	Introduction to Mathematical Statistics, 3 rd Ed.	R.E. Walpole	Prentice Hall	1987

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: CIV-304 **Course Title:** Geology and Mineralogy

2. Contact Hours: L: 2; T: 1; P: 0

3. Examination Duration (Hrs): Theory: Practical:

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **3rd Semester:**
Autumn Spring

6. Objective:

To impart the basic understanding of the formation of rocks and minerals and to expose the students to the basic erosional and depositional processes.

7. Details of the Course:

S. No.	Particulars	Contact Hrs.
1.	Physical Geology:	
	Introduction to the science of geology.	3
	Crust of earth and its composition.	3
	Minerals and Rocks.	3
	Weathering of Rocks; Erosion, transportation and deposition by wind, Water and ice.	6
2.	Introduction to geological structures.	3
	Mineralogy:	
	Rock forming minerals and ore forming minerals. Processes of mineral formation. Physical properties of minerals.	4
	Introduction to ore minerals. Principle ore minerals of Aluminum, Copper, Lead, Zinc, Antimony, Nickel, Tin, Chromium, Magnesium and Iron, their important properties, mode of formation, mode of occurrence, uses and distribution in India.	10
	Study of Refractory minerals, coal and petroleum.	4
	Total	36

8. Suggested Books:

S. No.	Name of Book/Author/Publisher	Author(s)	Publisher	Year of Publications
1.	Principles of Engineering Geology,	Bangar, K.M,	Standard Publishers Distributors, New Delhi.	1995
2.	Engineering Geology	Parbin Singh	Katson Publishers New Delhi.	2009
3.	Structural Geology	Billings, M.P.	Prentice-Hall India, New Delhi.	1974
4.	Geology for Engineers	Blyth, F.G.H and de Freitas, M.H.	ELBS, London.	1974
5.	Experiments in Engineering Geology	Gokhale, KVG.K and Rao, D.M.	Tata-McGraw Hill, New Delhi.	1981
6.	Textbook of Engineering Geology	Kesavulu, C.	Macmillan, India Ltd. New Delhi	1993
7.	Geology for Civil Engineers	McLean and Gribble	Spon Press, Taylor & Francis Group, London	1999

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: CIV-304P **Course Title:** Laboratory Practice in Geology and Mineralogy

2. Contact Hours: L: 0; T: 0; P: 2/2

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: MSLE: ESLE:

5. Credits: **3rd Semester:**

Autumn Spring

6. Objectives:
To impart the basic skills for determination of characteristics of rocks and minerals.

7. List of Experiments:

S. No.	Experiments
1.	The study of physical properties of minerals (form, luster, fracture, cleavage, streak, hardness, specific gravity, colour etc). 6 h
2.	Determination of specific gravity by: a. Jolly's balance b. The beam balance c. The walkers steel yard balance. 6 h
3.	Study of rocks and their characteristics (Igneous - Granite & Basalt; Sedimentary- Sandstone and Limestone; and Metamorphic - Quartzite, Marble, slate, Gneiss and Schist). 4 h
4.	Study and sketching of various types of geological structures. 6 h
5.	Determination of dip and strike with a clinometers compass. 6 h

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MEC-302 **Course Title:** Mechanics of Solids

2. Contact Hours: L: 2; T: 1; P: 0

3. Examination Duration (Hrs): Theory: Practical:

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **3rd Semester:**
 Autumn Spring

6. Objective:
To familiarize with the fundamental principles of stress and strain, mechanical properties and to understand the response of members to flexural loads etc.

7. Details of the Course:

S.No.	Particulars	Contact Hours
1.	Analysis of Stresses and Strains - Two dimensional state of stress and strain, Principle stresses/strains and principle planes/ axes. The stress and strain circles. Measurement of techniques as applied to stresses, etc. Poisson's ratio, Hooke's Law, Surface and Volumetric strains, Elastic constants and their relationships. Mechanical Properties: Stress - Strain diagrams.	09
2.	Elastic and plastic behavior under multi-axial stresses. Mechanical properties at high and low temperatures under static and cyclic stresses. Members in Bi-Axial State of Stresses: Stresses and strain in thin cylindrical and spherical shells subjected to internal pressures.	14
3.	Members subject to Flexural Loads: Theory of simple bending. Distribution of normal and shear stresses, principle stresses. Built-up and composite beams. Bending movements, slope and deflection.	09
4.	Various methods of deflection. Symmetrical and un-symmetrical bending. Fracture Mechanics. Columns: Short struts subjected to axial and multiaxial loads. Euler's theorem. Critical and Eccentric loading.	10
	Total	42

8. Suggested Books:

S No.	Name of Book	Author(s)	Publisher	Year of Publication

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: **MSLE:** **ESLE:**

5. Credits: **3rd Semester:**
Autumn Spring

6. Objective:

To provide practical knowledge about the working of various relevant laboratory equipments.

7. List of experiments:

S. No.	Experiments
1.	Verification of K.V.I
2.	Verification of K.C.I
3.	Verification of Super position theorem.
4.	Verification of Thevinin's theorem
5.	Verification of Max. Power Transfer theorem
6.	Delta-star Transformation
7.	Obtaining resonance in RLC circuits
8.	Measurement of Power and Power factor 3 load
9.	Constructional details of a single phase transformer

2. Contact Hours: L: 3; T: 2; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **4th Semester:**
Autumn Spring

6. Objective:

To comprehend the laws of thermodynamics and their applications to metallurgical systems.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	Introduction: Basic concepts, postulates, and basic problems of thermodynamics. Reversible and irreversible reactions. First law of thermodynamics: Enthalpy. Heat capacity.	10
2.	Thermochemistry. Hess's law. Flame temperature. Second law of Thermodynamics: Entropy and its change, Carnot cycle. Free energy and Gibb's Helmholtz equation. Third law. Fugacity, activity and equilibrium constant. Free energy calculations. Activity measurement. Ellingham diagram. Richardson diagram. Solutions: Introduction – Le Chatelier principle. Partial molal quantities. Gibb's Duhem equation. Ideal, non-ideal and dilute solutions. Raoult's and Henry's laws. Alternative/standard states. Sievert's law, mixing excess functions.	20
3.	Regular solutions. Classius-clapeyron equation. Phase rule: liquid-vapour, solid-liquid, solid-vapour equilibria, and Trouton's rule. The thermodynamics of electro-chemical reversible cells. Introduction to statistical thermodynamics. Thermodynamics of inter phases.	12
Total		42

1. Subject Code: MME-402 **Course Title:** Introduction to Manufacturing Processes

2. Contact Hours: L: 3; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **4th Semester:**

Autumn Spring

6. Objective:
To provide the fundamentals of knowledge about various manufacturing processes.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	Historical perspective of manufacturing processes, classification of manufacturing processes, their advantages and disadvantages. Important methods of each manufacturing process	08
2.	Machining: Basic principles of lathe machine & operations performed on it. Basic description of machines & operations of shaper-planer, drilling, milling, grinding. Unconventional machining processes , Machine tools	06
3.	Casting: pattern & allowances. Molding sands & its desirable properties. Mould making with the use of a core. Gating system. Casting defects & remedies. Cupola furnace. Die-casting & its uses.	06
4.	Metal forming: Basic metal forming operations & uses of such as-forging, rolling, wire & tube drawing/making & extrusion, & its products/applications, press work & die & punch assembly, cutting & forming, its application. Hot working vs Cold working.	06
5.	Powder metallurgy: powder metallurgy process & its applications, plastic-products manufacturing, galvanizing & electroplating.	
6.	Joining methods: Fusion welding processes, solid phase welding, gas welding, arc welding, TIG welding, MIG welding, Submerged arc welding, electro slag, welding, electron beam welding, laser welding, cold pressure welding, ultrasonic welding, friction	08

7.	welding and explosive welding; brazing and soldering; principles involved, process details and equipment used for above welding processes. Plastic part manufacturing methods, injection moulding, blow moulding, compression moulding and transfer moulding. Thermo forming, rapid proto typing etc.	08
Total		42

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **4th Semester:**
Autumn Spring

6. Objective:

To learn the principles of numerical solutions of equations and computer programming.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	NUMERICAL METHODS: Finite Differences: Difference table and its usage. The difference operators Δ , ∇ and the operator E.	02
2.	Interpolation: Interpolation with equal intervals. Newton's advancing difference formula. Newton's backward differences formula. Interpolation with unequal intervals. Newton's divided differences formula. Lagrange's interpolation formula. Spline functions.	05
3.	Central Differences: The central difference operator δ and the averaging operator μ , Relations between these operators. Gauss forward and backward interpolation formula, Sterling, Bessel's Laplace and Everetts formulae.	06
4.	Numerical Solution of Algebraic and Transcendental Equations. Graphic Method, Regula - Falsi Method, Balzano's Bisection Method, Newton - Raphson Method and its geometrical significance.	06
5.	Numerical Integration: Numerical integration. General Quadrature Formula, Trapezoidal rule. Simpson's one-third and three-eight rules, Weddells' rule, Hordy's rule.	06

6.	Numerical solution of ordinary differential equations. Numerical solution of ordinary differential equations, Picard's method, Taylors series methods, Euler's method, Runge-Kutta method.	04
7.	<p>COMPUTER PROGRAMMING: The application of Computer, Digital computer organization. Flow charts and decision tables. FORTRAN programming preliminaries. Fortran integer and real constants. Fortran variables and the names of variables. Fortran operations and expressions for addition, subtraction, multiplication, division and exponentiation. Mathematical functions. Arithmetic statements. Input-output statements. Format free statements. Simple computer programmes. Transfer of control: Control statements. The GoTo statements. The arithmetic IF statement. The logical IF statement. Relational operators. Elementary format specifications. Format description for PUNCH statement. The Do statement. Examples.</p> <p>C++ programming, simulation and modelling, Computing methods in Engineering problem solving in general and Metallurgical Engg. Problem in particular, working principal of genetic algorithm, artificial neural networking, fuzzy logic techniques, soft computing technique like fuzzy regression, fuzzy neuron nets etc.</p>	07

3.	Numerical methods, software and analysis	John R Rice	McGraw-Hill	1985
4.	Numerical Methods in Science and Engg.	S Rajasekaran	S Chand	2003

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MTH-405P **Course Title:** Laboratory Practice in Numerical Methods and Computer programming

2. Contact Hours: L: 0; T: 0; P: 2

3. Examination Duration (Hrs): **Theory:** - **Practical:** -

4. Relative Weightage: **MSLE:** - **ESLE:** -

5. Credits: 0 1 **4th Semester:**

Autumn Spring

6. Objective:
To provide basic knowledge about the problem formulation and writing of computer programs to solve the same.

7. List of Experiments:

S. No.	Particulars
1.	Given a set of N numbers $A_1, A_2, A_3, \dots, A_N$, to write a program and arrange them in an ascending sequence.
2.	To draw a flow chart and to write a Computer Program to compute the Scalar Product of two vectors X and Y given by Scalar Product $X_i Y_i$ where the quantities X_i, Y_i ($i=1, 2, \dots, 15$) are known.
3.	To write a Program and then compute the roots of the quadratic equation $Ax^2 + Bx + C = 0$ for different values of A, B and C.
4.	The formula for computing standard deviation() of normal distribution is where x_i represents an individual number of group numbers, \bar{x} the arithmetic mean of the group of numbers, and N the size of group of numbers. Draw a flow chart and compute the standard deviation of a given set of 500 numbers x_1, x_2, \dots, x_{500} .
5.	Program to find a real root of $F(x) = 0$ by Newton Raphson Method.
6.	Program to evaluate the integral of $F(x)$ between limits A and B using Simpsons and Trapezoidal rule
7.	Program to solve an ordinary differential equation $dy / dx = f(x,y)$ using Euler method.

8. Program to compute the solution of $dy / dx = f(x,y)$, $y(x_0) = y_0$ using the classical Runge - Kutta Fourth order method.

9. To write a program to compute and print the values of the safe loading S for $R = 25(25)250$ where

$$S = 17,000 - 0.485 R^2 \text{ for } R < 120$$

$$18,000 / (1 + R^2 / 18,000) \text{ for } R \geq 120$$

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MEC-412 **Course Title:** Heat Transfer and Fluid Flow

2. Contact Hours: L: 3; T: 0; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **4th Semester:**

Autumn Spring

6. Objective:

To understand the basic principles of heat transfer and fluid flow.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	Modes and Laws of heat transfer. CONDUCTION: Steady State and unsteady state. Heat flow through composite walls. Heating and cooling of plates, cylinders and spheres. CONVECTION: Free and forced convection. Reynolds, Crasshoofs, Nusselt and Station numbers.	10
2.	RADIATION: Emissivity, absorptivity, reflectivity and transmissivity. Simple Heat transfer between black and gray surfaces. Re-radiating surfaces. Heat losses from furnaces. Combined effects of conduction, convection and radiation. Steady and unsteady heat flow in some metallurgical processes, e.g melting, solidification, heating/cooling of ingots and billets, etc.	16
3.	FLUID FLOW: Viscosity and Newton's law of viscosity. Newtonian and non-Newtonian fluids. Conservation of mass and continuity equation. Energy of fluids. Euler's and Bernoullis equations. Loss of energy due to friction. Flow through pipes. Laminar and Turbulent Flow, Reynold's number. Compressed air and air blasts. Energy used for compression. Compressor and blower efficiency characteristics.	16
Total		42

8. Suggested Books:

S. No.	Name of the Book	Author(s)	Publisher	Year of Publications
1.	Engineering Heat Transfer	Gupta & Prakash	Nem Chand & Bros.	1976
2.	A Text on Heat transfer	S.P. Sukjhatme	Universities Press (India) Pvt. Ltd	2005
3.	Heat transfer	Holman	McGraw-Hill	1976
4.	Heat transfer	Domkundwar	Dhanpat Rai Publishing Company (P) Ltd.	2005
5.	Fluid Mechanics	Khurmi	S. Chand & company	1987

2. Contact Hours: L: 2; T: 0; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **4th Semester:**

Autumn Spring

6. Objective:

To gain knowledge about the basics of electronics, and to familiarize with the working principles of metallurgical industrial electronic instruments.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	Construction, symbol and characteristics of semiconductors diodes, transistors and silicon-controlled rectifiers. Rectifiers and invertors. Motor control.	13
2.	Induction and dielectric heating. Electric arc furnaces and their accessories. Ultrasonic waves and their applications. Pulse, digital and switching circuits and systems. Transducers.	15
3.	Measurements of current, voltage, power and energy. Cathode-ray oscilloscope and its applications.	10
4.	Temperature control, gas flow and fluid flow controls, PID, load cells, and strain gauge etc.	04
Total		42

8. Suggested Books:

S. No.	Name of the Book	Author(s)	Publisher	Year of Publications

1. Subject Code: MME-501 **Course Title:** Kinetics of Materials

2. Contact Hours: L: 4 ; T: 1 ; P: 0

3. Examination Duration (Hrs): Theory: Practical:

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **5th Semester:**

Autumn Spring

6. Objective:

To provide an understanding of the thermodynamic principles and kinetics pertaining to the metallurgical processes/systems.

7. Details of the Course:

S. No	Particulars	Contact Hours
1.	Brief review of generalized systems, solutions and laws/ postulates.	02
2.	Statistical thermodynamics, thermodynamics of interfaces. Phase rule, liquid-vapor, solid-vapour, solid liquid and solid-solid equilibria, heterogeneous equilibria. Equilibrium and temperature-pressure diagrams, their applications to various metallurgical systems.	10
3.	Chemical kinetics and its related laws, theories of reaction rates, reaction mechanism, kinetics of important metallurgical processes.	08
4.	Concept of activated state and activated energy. Diffusion in solids, Fick's laws and Kirkendal effect. Diffusion in direct/indirect reduction and agglomeration processes. Kinetics of heterogeneous metallurgical operations: viz Gas-solid, slag metal, and other such systems. Kinetics of solid state transformations. Mass transfer in solid, liquid and gaseous systems.	22

Autumn Spring

6. Objective :

To familiarize with the conduct of different experimental studies.

7. List of Experiments

S. No:	Experiments
1.	Determination of Specific Heat by Bomb calorimeter (Adiabatic)
2.	Determination of Specific Calorimetry (Isothermal)
3.	Measurement of Partial Molar Volume
4.	Study of Thermo-Analytical Techniques of Dissociation of Carbonates
5.	To study the calcination of CaCO ₃ and calculate the percentage decomposition by varying time and temperature.
6.	To study the effect of time and temperature on the kinetics of roasting of CuS.
7.	To study the cementation process for extraction of copper from CuSO ₄ bath with iron.

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MME-502 **Course Title:** Principles of Metal Extraction and Refining Processes

2. Contact Hours L: 4 ; T: 1; P: 0

3. Examination Duration (Hrs): Theory: Practical:

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **5th Semester:**
Autumn Spring

6. Objective:

To familiarize with the processing of ores and to extract valuable minerals.

7. Details of the Course:

S. No	Particulars	Contact Hours
1.	Location of principal ore bodies and extracting plants. Indian Mineral resources and metallurgical industries. Estimated tonnage of metals produced /imported /exported by India. Purpose of Mineral Dressing, scope and limitation of available methods. Classification of ores.	01
2.	Comminution units like jaw crusher gyratory, cone crusher, Roll and impact crusher, attritor and other grinding units, their performance, applications and limiting reduction ratio. Sizing and classification. Methods of sizing, both Laboratory and Industrial. Various types of screens. Classification as a means of sizing. Laws of classification.	05
3.	Principles of Metallurgical Processes as applied to ores and concentrates for the extraction of metals: Importance of physico-chemical processes in metal extraction and refining. Roasting processes: drying and calcination, oxidizing, sulphatizing, chlorination, flourination and reducing roasting, Sintering and other agglomeration processes, Smelting processes: reducing, oxidizing electro-thermic, metallothermic and reaction smelting processes, Refining processes: liquification, fractional re-crystallization, distillation, oxidation, chlorination, Sulphidizing and carbon refining processes, Hydro-metallurgical processes: leaching, refining of leach solutions, recovery of metals; electrolytic and bacteria processes, Electro-metallurgical processes: Principles, advances, processes and	15

4.	<p>applications of electro- refining, electrolytic cleaning, electro-polishing, electro-forming, electro-leaching, electro-machining, etc. Regeneration of electrolytes.</p> <p>Slags and their functions in extractive Metallurgy. Principles of working of the equipment used for roasting and agglomeration. Hearth roasters, flash roasters, fluidized bed roasters, sintering machines, etc.</p>	21
	<p>Over view of the Physico-Chemical principles and processes of metal extraction.</p> <p>Production /extraction of heavy metals (Cu, Pb, Zn, Sn, Ni, Cr, Sb, Co). Light metals (Al, Mg, Ti) and precious metals (Au, Ag, Pt). Rare metals (W, Mo, Zr, U, Be) and semi-conductor metals (Ge, Si).</p> <p>Detailed flow sheets for the extraction/production of the above metals</p>

1. Subject Code: MME-502P **Course Title:** Laboratory Practice in Mineral Processing

2. Contact Hours: L:0 ; T: 0; P: 4

3. Examination Duration (Hrs): Theory: Practical:

4. Relative Weightage: MSLE: ESLE:

5. Credits: **5th Semester:**

Autumn Spring

6. Objective:

To provide understanding of the basic construction, and principles of working different mineral processing equipments.

7. List of Experiments

S.No:	Experiments
1.	To study the parts of a Jaw Crusher and to operate it using different ore materials and various gape settings, and determine the reduction ratios.
2.	To study the size reduction of an ore by a roll crusher using different roll settings.
3.	Use a laboratory ball mill to reduce a given crushed ore to a - 200 μm size fraction using different milling times and changing the weight of the grinding medium. Make energy calculations. Compare the energy efficiency of attritor with ball mill.
4.	To perform Sieve Analysis on a given dry milled Ore for 1/2, 1 and 2 hrs and to calculate i) percentage loss in screening, ii) the average size of particles and iii) plot various sizing curves.
5.	To study the effect of any one of the following grinding variables on the performance of the ball mill or rod mill; i) Ball load or rod load ii) time of grinding.
6.	Conduct the Classification of a mill product using a) Spiral Classifier b) A Cyclone.
7.	Concentrate a given Sulphide Ore (Chalcopyrite, Sphalarite, Galena) by Froth Flotation and list the reagents used.
8.	Concentrate a given Ore using: a) Shaking Tables b) Magnetic Separator, and c) Jigs.
9.	Study of a) Hammer mill, and b) Impact mill.
10.	Study the working of a) Screens, and b) Grilles
11.	Study of a Thickener. Dewatering a given slurry by thickening. Determination of Fines carried by thickener overflow.
12.	Filtering a given slurry under normal gravity and using Vacuum Filtration.
13.	Heavy media separation of Coal

4. Relative Weightage: **M-I:** **M-II:** **ASM:** **ME:** **PRE:**

5. Credits: **5th Semester:**
 Autumn Spring

6. Objective:

To understand the basic principles of the techniques used for the study of metal samples.

7. Details of the Course:

S. No	Particulars	Contact Hours
1.	Macro and Micro examination of materials, principle of a Metallurgical microscope, microscopic objectives, chromatic and spherical aberration, different types of objectives.	03
2.	Properties of objectives. Magnifying power, Numerical aperture, resolving power, curvature of field and vertical resolution. Oil immersion objectives. Eyepieces- Negative, amplifying eyepieces, measuring and reticle type; low reflection coating. Types of Microscopes. Illuminating source, light collimators, cooling cells, light filters, diaphragms. Vertical illuminators, bright field and dark field illumination, prism and plan glass reflector, calcite prism, oblique illumination, conical stop illumination, critical Kohler illumination method, principles and techniques of photomicrography.	10
3.	Microscopy and Photomicrography with ultraviolet light. Microscopy with polarized light, principle of polarized light microscopy, equipment and technique. Principles of phase contrast microscopy and its application. Interferometry, principles and equipment details, Use and techniques of structure of metals. Maintenance and care of optical parts. Metallography: Examination of samples by low and high power microscopy. Preparation of metallic samples for microscopic and Microscopic examination. Etching of samples for metallographic examinations (Micro and Macro) Quantitative Microscopy:- Estimation of grain size, size distribution of inclusions from measurements on a two dimensional section, Image analysis through computers.	08
4.	X-Ray production. Characteristics of X-Rays. X-Ray diffraction. Diffraction theory and Techniques -Laue, Powder and rotating crystal	06

	techniques. Intensity calculations and structure determination.	
5.	Electron Microscopy and its applications to Metallurgical studies. Techniques of specimen preparation for electron microscopy.	04
6.	Principles of Electron diffraction. Electron Emission phenomenon. Field ion Microscopy,	04
7.	Introduction to techniques such as – Auger Electron spectroscopy, scanning tunneling microscopy, Atomic force microscopy.	04
8.	Electron Probe micro analysis etc. Detailed study of Radiographic techniques.	03
	Total	42

√

Autumn Spring

6. Objective:
To provide the knowledge of structure property correlation regarding different metals and alloys.

7. Details of the Course:

S.No.	Particulars	Contact Hours
1.	Brief review of Structure of metals and imperfections and their influence on the properties of materials. Classification and their influence on the properties of materials. Solid solutions - their characteristics and governing factors Classification - primary, secondary solid solutions and intermetallic compounds.	16
2.	Solidification and nucleation, thermal curves, phase rule and equilibrium diagrams and Iron carbon equilibrium diagram and the critical phenomena. Binary and ternary systems. Eutectic, eutectoid, peritectic, peritectoid, monotectic, and precipitation reactions. Binary system - Cu-Ni, Cu-Zn, Cu-Be, Cu-Al, Al-Zn, Al-Si, Al-Mg, Pb-Sn etc. Isothermal transformation of Fe-C systems. Ternary alloys -white metal, Ni-Silvers fusible alloys. Diffusion in solid state and its mechanism. Laws of diffusion. Kirkendal effect, Factors governing diffusion. Specifications of ferrous and non-ferrous alloys.	26
Total		42

2. Contact Hours: L: 0; T: 0; P: 2

3. Examination Duration (Hrs): **Theory:** - **Practical:** -

4. Relative Weightage: MSLE: - ELSE: -

5. Credits: 0 1 **6th Semester:**

Autumn Spring

6. Objective:
To study the microstructures and to familiarize with the measurement of micro-hardness of different materials.

7. List of Experiments:

S. No.	Experiments
1.	Study BCC, FCC, HCP crystal models (Computer aided studies)
2.	Study of Burgers vector in edge and screw dislocations.
3.	Measurement of Micro-hardness on the surface of a steel specimen.
4.	Stereographic projections - construction of Wulff's net.
5.	Microstructure study of various standard samples of steel, non-ferrous alloys (binary and ternary systems), and cast irons.

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MME-604 **Course Title:** Mechanical Behaviour of Materials

2. Contact Hours: L: 3; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **6th Semester:**
 Autumn Spring

6. Objective:

To develop basic understanding of the response of engineering materials to mechanical loading.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	Introduction to elasticity, stress-strain curves, toughness and stiffness.	03
2.	Yield phenomena, Slip-formation of slip line, slip bands, cross slip, twinning.	03
3.	Strain hardening, theories, stress curves for single and poly crystals, effect of grain size, temperature, speed, Bauschinger's effect, texture and preferred orientation.	06
4.	Effect of solutes and precipitates on yield stress and hardening.	02
5.	Influence of defects on the mechanical properties. Recovery, recrystallization and grain growth.	03
6.	Fracture -theory, classification and strength. Ductile to brittle fracture.	05
7.	Testing of materials, principles and its significance, measurement of load, length and deformation. Tests -static, tension and compression, static shear and bending, hardness and impact.	10
08.	Fatigue and creep	10
	Total	42

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: MSLE: **ELSE:**

5. Credits: **6th Semester:**

Autumn Spring

6. Objective:
To gain knowledge about the various joining methods and the working of equipments involved.

7. List of Experiments:

S. No.	Experiments
1.	Preparation and joining of two surfaces by soldering and brazing.
2.	Welding of cast irons, Aluminum, Copper and their alloys.
3.	Arc Welding of steel parts/welding to fill a hole in a steel trough.
4.	Gas welding of a given sample.
5.	Macro and Micro- examination of a welded joint.
6.	Determination of the strength properties of a welded joint and weld defects.
7.	Heat-treatment of a weld.
8.	Welding by other modern techniques for which facilities may be available.
9.	Welding of dissimilar metals i.e. Steel, cast iron, Stainless Steel, Mild steel, etc.

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MME-606 **Course Title:** Composites

2. Contact Hours: L: 3; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: **M-I:** **M-II:** **ASM:** **ME:** **PRE:**

5. Credits: **6th Semester:**

Autumn Spring

6. Objective:

To impart basic knowledge about the preparation, characterization, and applications of composite materials.

7. Details of the Course:

S.No	Particulars	Contact Hours
1.	An introduction to composites.	02
2.	Theoretical and actual strength of solids. Cleavage and shear strength, strength of bulk metals and fibres, etc.	06
3.	Strengthening Mechanisms in composites. Fibre composites, various types of fibres elastic fibres. Elastically and plastically deformable matrix.	06
4.	Effect of fibre orientation on composite strength. Fracture of fibres/ matrix/ composites.	05
5.	Dynamic properties of composite materials - fatigue, creep, high temperature properties, etc.	06
6.	Production of some commercially important composite materials (Resin matrix, ceramic matrix and metal matrix, reinforced plastics, glass fibre and carbon fibre). Directional solidification of eutectic, etc. Joining of composites.	06
7.	Applications of composite materials; civil construction of structure/panels, aerospace industries, automobiles and other surface transport industries, sports components etc.	04
8.		07
Total		42

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MME-607 **Course Title:** Tour, Training and Professional Interview

2. Contact Hours: L: 0 ; T: 0; P: 2

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: **M-I:** **M-II:** **ASM:** **ME:** **PRE:**

5. Credits: **6th Semester:**

Autumn Spring

6. Objective:

To gain practical knowledge about the actual working of the industries, processes involved and the functioning of the industrial equipments etc.

7. Details of the Course:

S.No	Particulars
1.	Each student will be required to undertake practical training during the winter vacations for about 10-16 weeks in metallurgical industries. Each student will submit a training report in the department and give details of the jobs he was assigned during the practical training at the industry where he has taken such practical training. Separate report for the training taken at different industries will be required to be submitted by each candidate.
2.	The students will also be required to go for a long industrial/educational tour to visit various industries and educational Organizations of Metallurgical concern. Each student will submit a tour report on completion of the tours.
3.	The tour and training report as submitted by each student will be assessed by the staff members and evaluated for sessional awards.
4.	A viva-voce examination will be conducted by an External Examiner for assessment of Tour and Training undertaken by each student and for his/her professional achievements, Group discussing during the 7 th and 8 th semester course work.

1. Subject Code: HSS-701 **Course Title:** Industrial Economics & Management

2. Contact Hours: L: 2; T: 1; P: 0

3. Examination Duration (Hrs): Theory: Practical:

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **7th Semester:**
 Autumn Spring

6. Objective:

To gain knowledge about the concepts involved in industrial economics and management.

7. Details of the Course:

S. No.	Particulars	Contact Hours
1.	INDUSTRY: Introduction to industry, Industrialization, Benefits of industrialization. Economics and social effects of industrialization. MANAGEMENT: Meaning of management, functions and principles of management, industrial change and development.	08
2.	MANAGEMENT OBJECTIVES: Defining management objectives, Testing of objectives, Primary, secondary and social objectives of management.	07
3.	PERSONNEL MANAGEMENT: Importance of personnel management. Main functions of personnel department. Selection, training and placement of manpower resources. ECONOMIC SCIENCE: Division of economics and development of economic life	09
4.	CONSUMPTION: Nature of human wants and their satisfaction - utility, law of diminishing marginal utility, Law of demand and supply, elasticity of demand.	06
5.	PRICE DETERMINATION: Concept of markets, - competent and monopoly markets - price and output determination under perfect competition and monopoly.	07
6.	PRODUCTION: Meaning of production, production function, laws of production.	05
Total		42

4. Relative Weightage: M-I: M-II: ASM: ME: PRE:

5. Credits: **7th Semester:**

Autumn Spring

6. Objective:

To understand the basic principles of steel making

7. Details of the Course:

S. No	Particulars	Contact Hours
1.	Brief history and earlier methods of steel making. Mixers and their merits. Desiliconization and desulphurization of B.F iron.	06
2.	Steel making by Bessemer and side blown converters O.H and Duplex/Triplex methods, Electric-Arc and Induction processes. Basic oxygen processes -L.D KALDO, ROTOR, LDAC, and top and bottom blown practices.	10
3.	Physico-Chemical principles of each of the above practices. Inclusions in steel. Deoxidation and vacuum treatment of steels.	05
4.	Electroslag refining. Ingot mould and base plate preparation for casting. Steel casting practice. Ingot defects and their control. Continuous casting practice of steel and its merits. Principles and production of alloy steels - HSLA, Tool and die, stainless, spring, magnetic and silicon steels etc.	15
5.	Recent trends in plain and alloy steel technology. Instrumentation in steel works. Indian Steel plants and practices.	06
Total		42

Autumn Spring

6. Objective:

This course aims at providing the fundamental knowledge about chaotic dynamical systems and control.

7. Details of the Course:

S. No	Particulars	Contact Hours
1.	Principles of dynamical systems: orbits, fixed and periodic points, bifurcations, transition to chaos, Feigenbaum’s constant, Sarkovskii’s theorem, period 3 window; The role of critical orbits: the Schwarzian derivative, Stability of fixed l points and basin of attraction	21
2.	Models of controlled systems and controlled goals	
3.	Methods of controlling chaos: Feed forward control: piecewise constant dither control; OGY method: linearization of Poincare’ map; Delayed feedback-method of time-delayed feedback; Linear and nonlinear control- Open plus closed loop (OPCL), SG method based on Lyapunov function; Adaptive Control- direct or indirect (identification- based) parametric adaptive control;	
4.	Discrete time control: low-order examples	
5.	Neural networks in the field of chaos control	
6.	Generation of chaos: chaotization in multidimensional discrete systems; dynamics of variation of chemical potentials in multidimensional system and slow approach to equilibria	
7.	Chaotic mixing: mixing of stirred fluids, increasing rate of mixing by increasing chaoticity	
8.	Fractals: iterated function systems	21

7th Semester:

√

--

Autumn Spring

6. Objective:

To carry out the basic work with regard to the literature survey, preparation of design and fabrication of the experimental set up etc, list of required consumable and non-consumable items etc.

7. Details of the Course:

S. No	Particulars
1.	Each student will undertake a project work, involving complete literature survey, design and fabrication of some working process models, and /or a laboratory experimentation, and presentation of results, under the supervision of a faculty members to be fixed in a meeting of the faculty members of the department keeping in view the students choice of project topic, their aptitude, facilities available and the availability of staff.
2.	The project will be assigned before the conclusion of the 6th semester examination and students will start working on literature survey etc., when 7th semester classes commence. A write-up and a complete list of consumables and non-consumable items to be needed by each student to complete the project work will be submitted to the teacher concerned in a fairly typed form for assessment and for arranging the materials from the market, if necessary, so that the practical work is started just at the commencement of the 8th semester classes. Each student will submit a complete literature survey of the project work assigned to the concerned supervisor for assessment.

NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR

NAME OF DEPARTMENT : Metallurgical & Materials Engineering

1. Subject Code: MME-710 **Course Title:** Guided Reading, Group Discussion and Seminar

2. Contact Hours: L: 0 ; T: 1; P: 0

3. Examination Duration (Hrs): **Theory:** **Practical:**

4. Relative Weightage: **GD:** **WUP:** **PRE:**

5. Credits: **7th Semester:**

Autumn Spring

6. Objective:
To prepare the students for the group discussions, preparation of talks/seminar etc.

7. Details of the Course:

S.No	Particulars
1.	A co-curricular activity based on guided reading and seminar talks. This will involve a detailed study of a topic of interest production in the candidates own style. Each student will be required to give seminar talks on the subject of interest. The handouts of the talks will be submitted by the student before the talk is delivered. These seminar talks will prepare the students for proper survey of literature, compilation of information so gathered and presentation of the same to the audience. The handouts submitted by the students will be in accordance with the standard of technical papers.
2.	The award of sessional will be based upon the preparation and presentation of seminar talks and performance in the group
